ILLITERACY.

P 1124

Illiteracy of the American Negroes compared with that of other nations.

Proportion d' illettrés parmi les Nègres Américains comparée à celle des autres nations.

Done by Atlanta University.

Conjugal condition of American Negroes according to age periods.

Condition conjugale des Nègres Américains au point de vue de l'âge.

Done by Atlanta University.

CITY AND RURAL POPULATION. 1890.

close either of these instruments, support it in a vertical position by resting the needle point on the paper and bearing slightly on the top of it with the forefinger of one hand, and turn the adjusting nut with the thumb and middle finger of the same hand.

FIG. 13.

12. Drawing Paper and Pencils.—The drawing paper recommended for this series of lessons is the T. S. Co.'s cold-pressed demy, the size of which is 15" X 20". It takes ink

well, and withstands considerable erasing. The paper is secured to the drawing board by means of thumbtacks.

Four are usually sufficient—one at each corner of the sheet (see Fig. 7). Place a piece of paper on the drawing board, and press a thumbtack through one of the corners about $\frac{1}{4}$ or $\frac{3}{8}$ of an inch from each edge. Place the T square in position for drawing a horizontal line, as before explained, and straighten the paper so that its upper edge will be parallel to the edge of the T square blade. Pull the corner diagonally opposite that in which the thumbtack was placed, so as to stretch the paper slightly, and push in another thumbtack. Do the same with the remaining two corners. For drawing in pencil, on HHHH pencil of

the lead projecting, then sharpen it flat by rubbing it against a fine file or a piece of fine emery cloth or sandpaper that has been fastened to a flat stick. Grind it to a sharp edge like a knife blade, and round the corners very slightly, as shown in the figure. If sharpened to a round point, as shown at B, the point will wear away very quickly and make broad lines; when so sharpened it is difficult to draw a line exactly through a point. The lead for the compasses should be sharpened in the same manner as the pencil, but should have its width narrower. *Be sure that the compass lead is so secured that, when circles are struck in either direction, but one line will be drawn with the same radius and center.*

13. Inking.—For drawing ink lines other than arcs of circles, the **ruling pen** (or *right-line pen*, as it is sometimes called) is used. It should be held as nearly perpen-
